

Tasks:

- Use Command `whoami` and figure out the output. You can use `man` to know more about `whoami`.
- Use Command `hostname` and figure out the output. You can use `man` to know more about `hostname`.
- Use history command and run one of the processes that appears in the history without re-write the command?
- Find since when your system was running?
- Get the date and time in Dubai using CLI?
- Store calendar output to a file called `calender.txt`
- Use this command `echos "Oh there is an error"` then save the error(output) if appears to file called `logs.txt`
